Data Source: The Maine Childhood Lead Poisoning Prevention Program provided the blood lead screening data. Population data provided by the Census Bureau were used to calculate the percent of children with a blood lead screening test. Information on population data is included in the glossary. The data display was prepared by the Maine Environmental Public Health Tracking Program. Revision date: 02-03-2012

An elevated blood lead level (eBLL) is a blood lead level greater than or equal to 10 micrograms per deciliter of blood.
